Medical Records

HELLO!

Hope everyone's doing great.

EMR :

Electronic medical records (EMRs) are a digital version of the paper charts in the clinician's office. An EMR contains the medical and treatment history of the patients in one practice.

EMR vs EHR - What is the Difference?

EMR vs EHR? Electronic medical records vs electronic health records? Confusion abounds - learn more about th...

 Health IT Buzz / Peter Garrett / Jan 4, 2011

EHR :

An electronic health record (EHR) is a digital version of a patient's paper chart. EHRs are real-time, patient-centered records that make information available instantly and securely to authorized users.

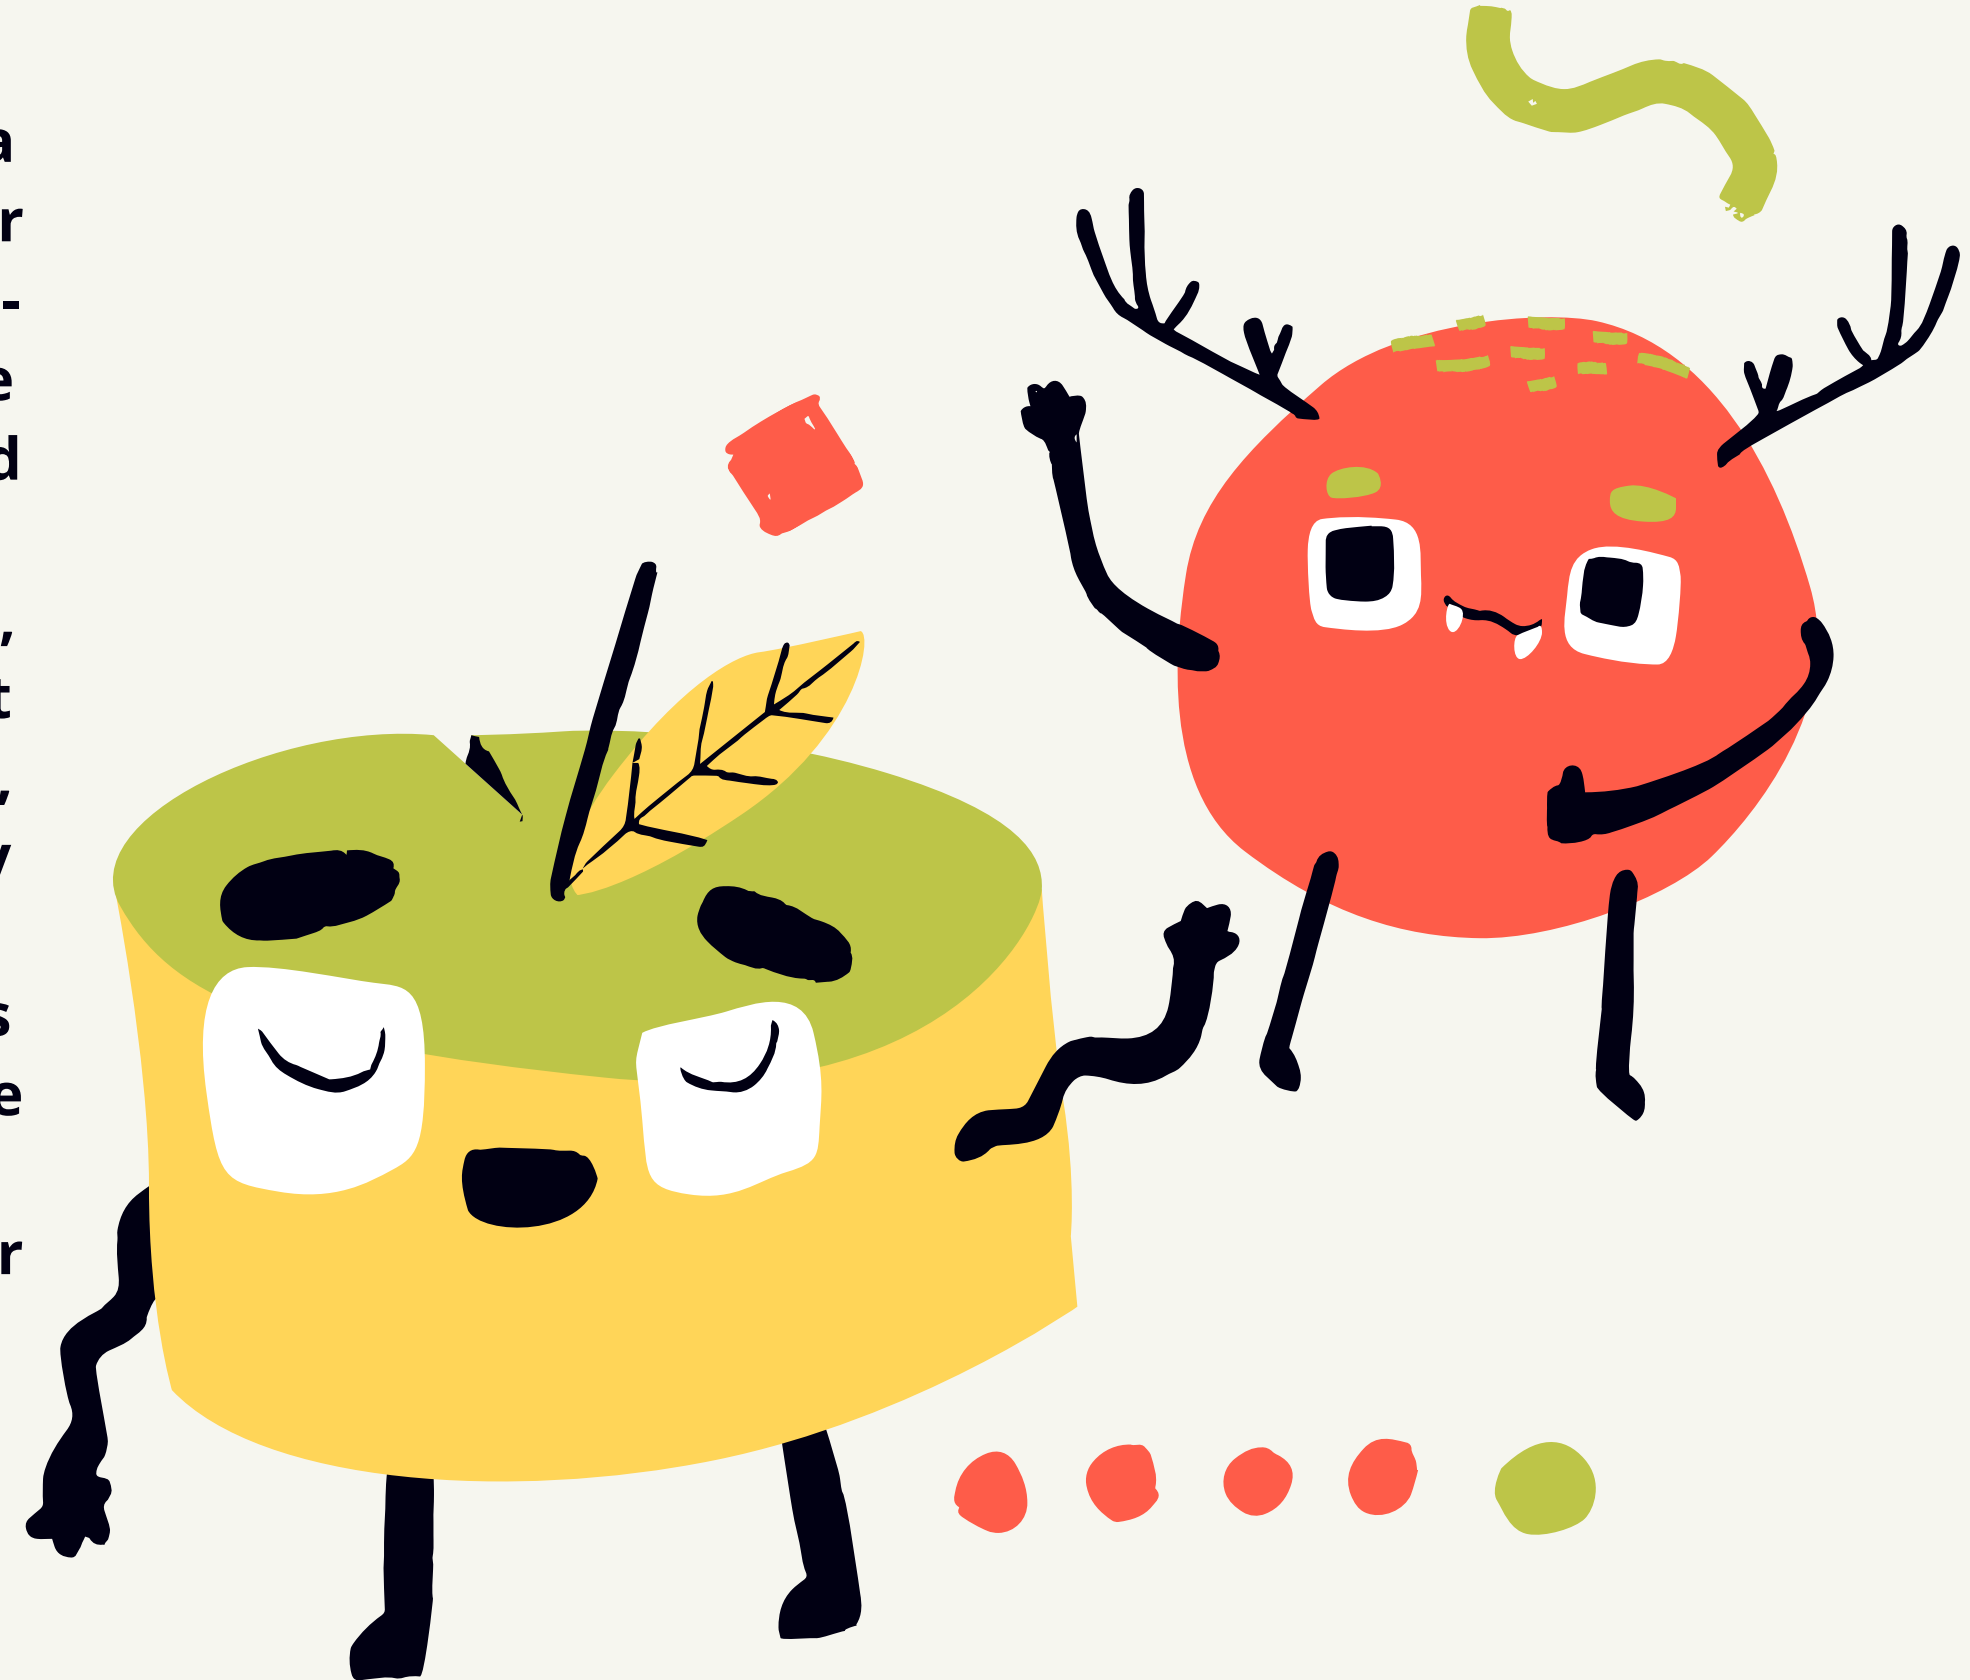

- Contain a patient's medical history, diagnoses, medications, treatment plans, immunization dates, allergies, radiology images, and laboratory and test results
- Allow access to evidence-based tools that providers can use to make decisions about a patient's care
- Automate and streamline provider workflow

What is an electronic health record (EHR)?

An electronic health record is more than just a computerized version of a paper chart. Learn more about...

EPMA

Electronic Prescribing & Medicines Administrations Current System :

Illegible hand writing on prescriptions & charts.
Incomplete information being recorded on order
In-appropriate ordering.
Transcription errors.
Lost or misplaced drug charts.
Physically transferring the order from wards to
dispensaries is not timely.
Error in calculations for specific medicine doses.

PDMP

A prescription drug monitoring program (PDMP) is an electronic database that tracks controlled substance prescriptions in a state. PDMPs can provide health authorities timely information about prescribing and patient behaviors that contribute to the epidemic and facilitate a nimble and targeted response.

LABORATORY INFORMATION SYSTEM

LIS

LIS software system that records, manages, and stores data for clinical laboratories. A laboratory information system (LIS) is computer software that processes, stores and manages data from all stages of medical processes and tests. Physicians and lab technicians use laboratory information systems to coordinate varieties of inpatient and outpatient medical testing, including hematology, chemistry, immunology and microbiology.

DIGITAL PATHOLOGY

Digital pathology includes the acquisition, management, sharing and interpretation of pathology information — including slides and data — in a digital environment. Digital slides are created when glass slides are captured with a scanning device, to provide a high-resolution image that can be viewed on a computer screen or mobile device.

EPS

Electronic Pharmacy System
/ Electronic Prescribing System

Electronic prescribing (e-prescribing or e-Rx) is the computer-based electronic generation, transmission, and filling of a medical prescription, taking the place of paper and faxed prescriptions. E-prescribing allows a physician, physician assistant, pharmacist, nurse practitioner to use digital prescription software to electronically transmit a new prescription or renewal authorization to a community or mail-order pharmacy.

OPQRST, an effective patient assessment tool

OPQRST is a useful mnemonic (memory device) used by EMTs, paramedics, as well as nurses, medical assistants and other allied health professionals, for learning about your patient's pain complaint. It is a conversation starter between you, the investigator, and the patient, your research subject. It is specifically adapted to elicit symptoms of a possible heart attack.

- **ONSET OF THE EVENT**
- **PROVOCATION OR PALLIATION**
- **QUALITY OF THE PAIN**
- **REGION AND RADIATION**
- **SEVERITY**
- **TIME (HISTORY)**

1

onset: "Did your pain start suddenly or gradually get worse and worse?" This is also a chance to ask, "What were you doing when the pain started?"

2

Provokes or Palliates: Instead of asking, "What provokes your pain?" use real, casual words. Try, "What makes your pain better or worse?"

3

Quality: Asking, "Is your pain sharp or dull?" limits your patient to two choices, when their pain might not be either. Instead ask, "What words would you use to describe your pain?" or "What does your pain feel like?"

4

Radiates: This is another chance to use real, conversational words during the assessment. Asking, "Does your pain radiate?" sounds silly and pompous to the patient. Instead use this question, "Point to where it hurts the most. Where does your pain go from there?"

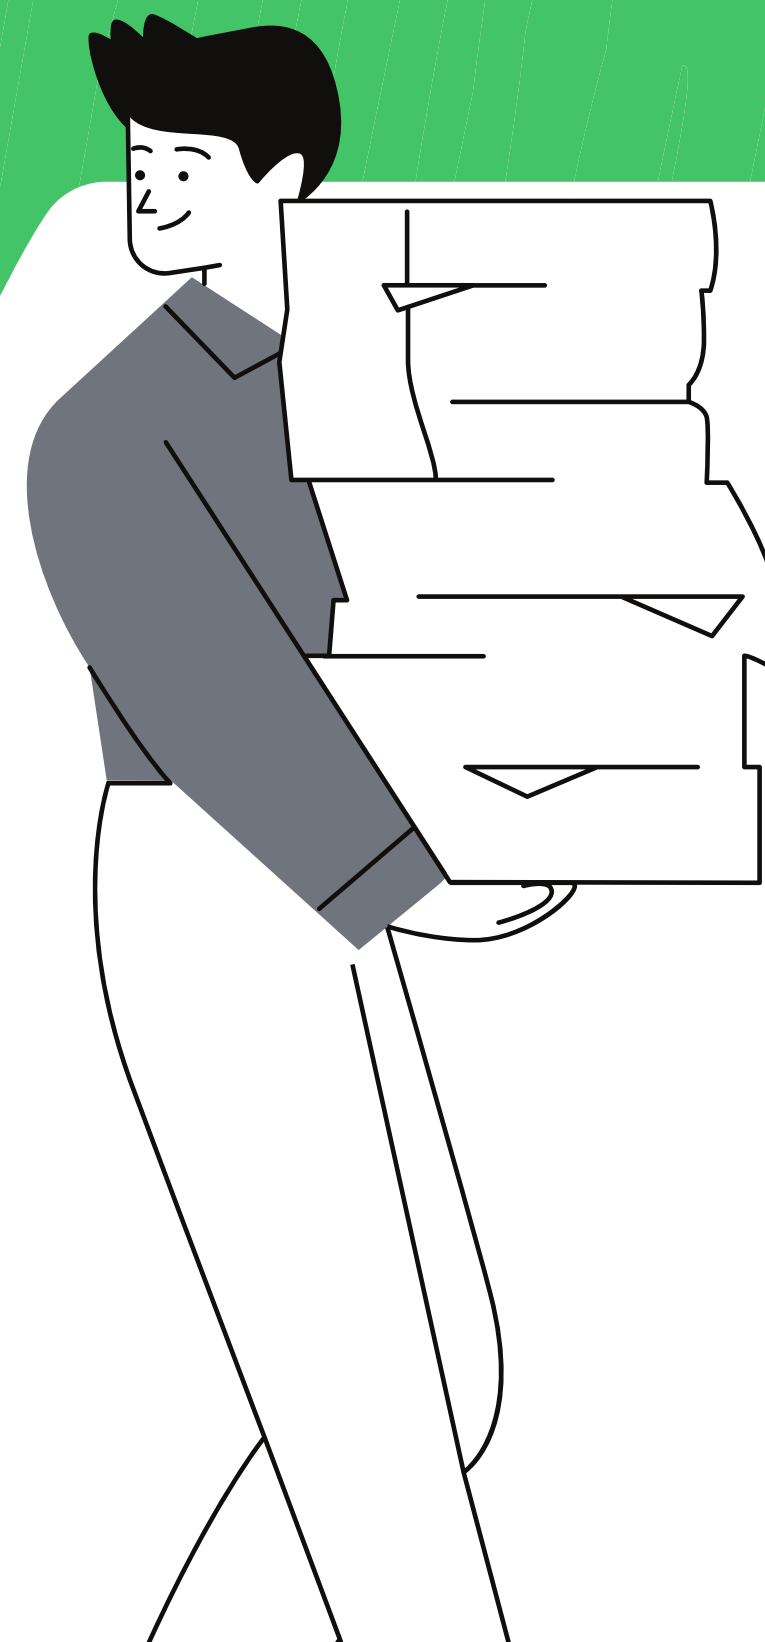

4

Severity: Remember, pain is subjective and relative to each individual patient you treat. Have an open mind for any response from 0 to 10.

4

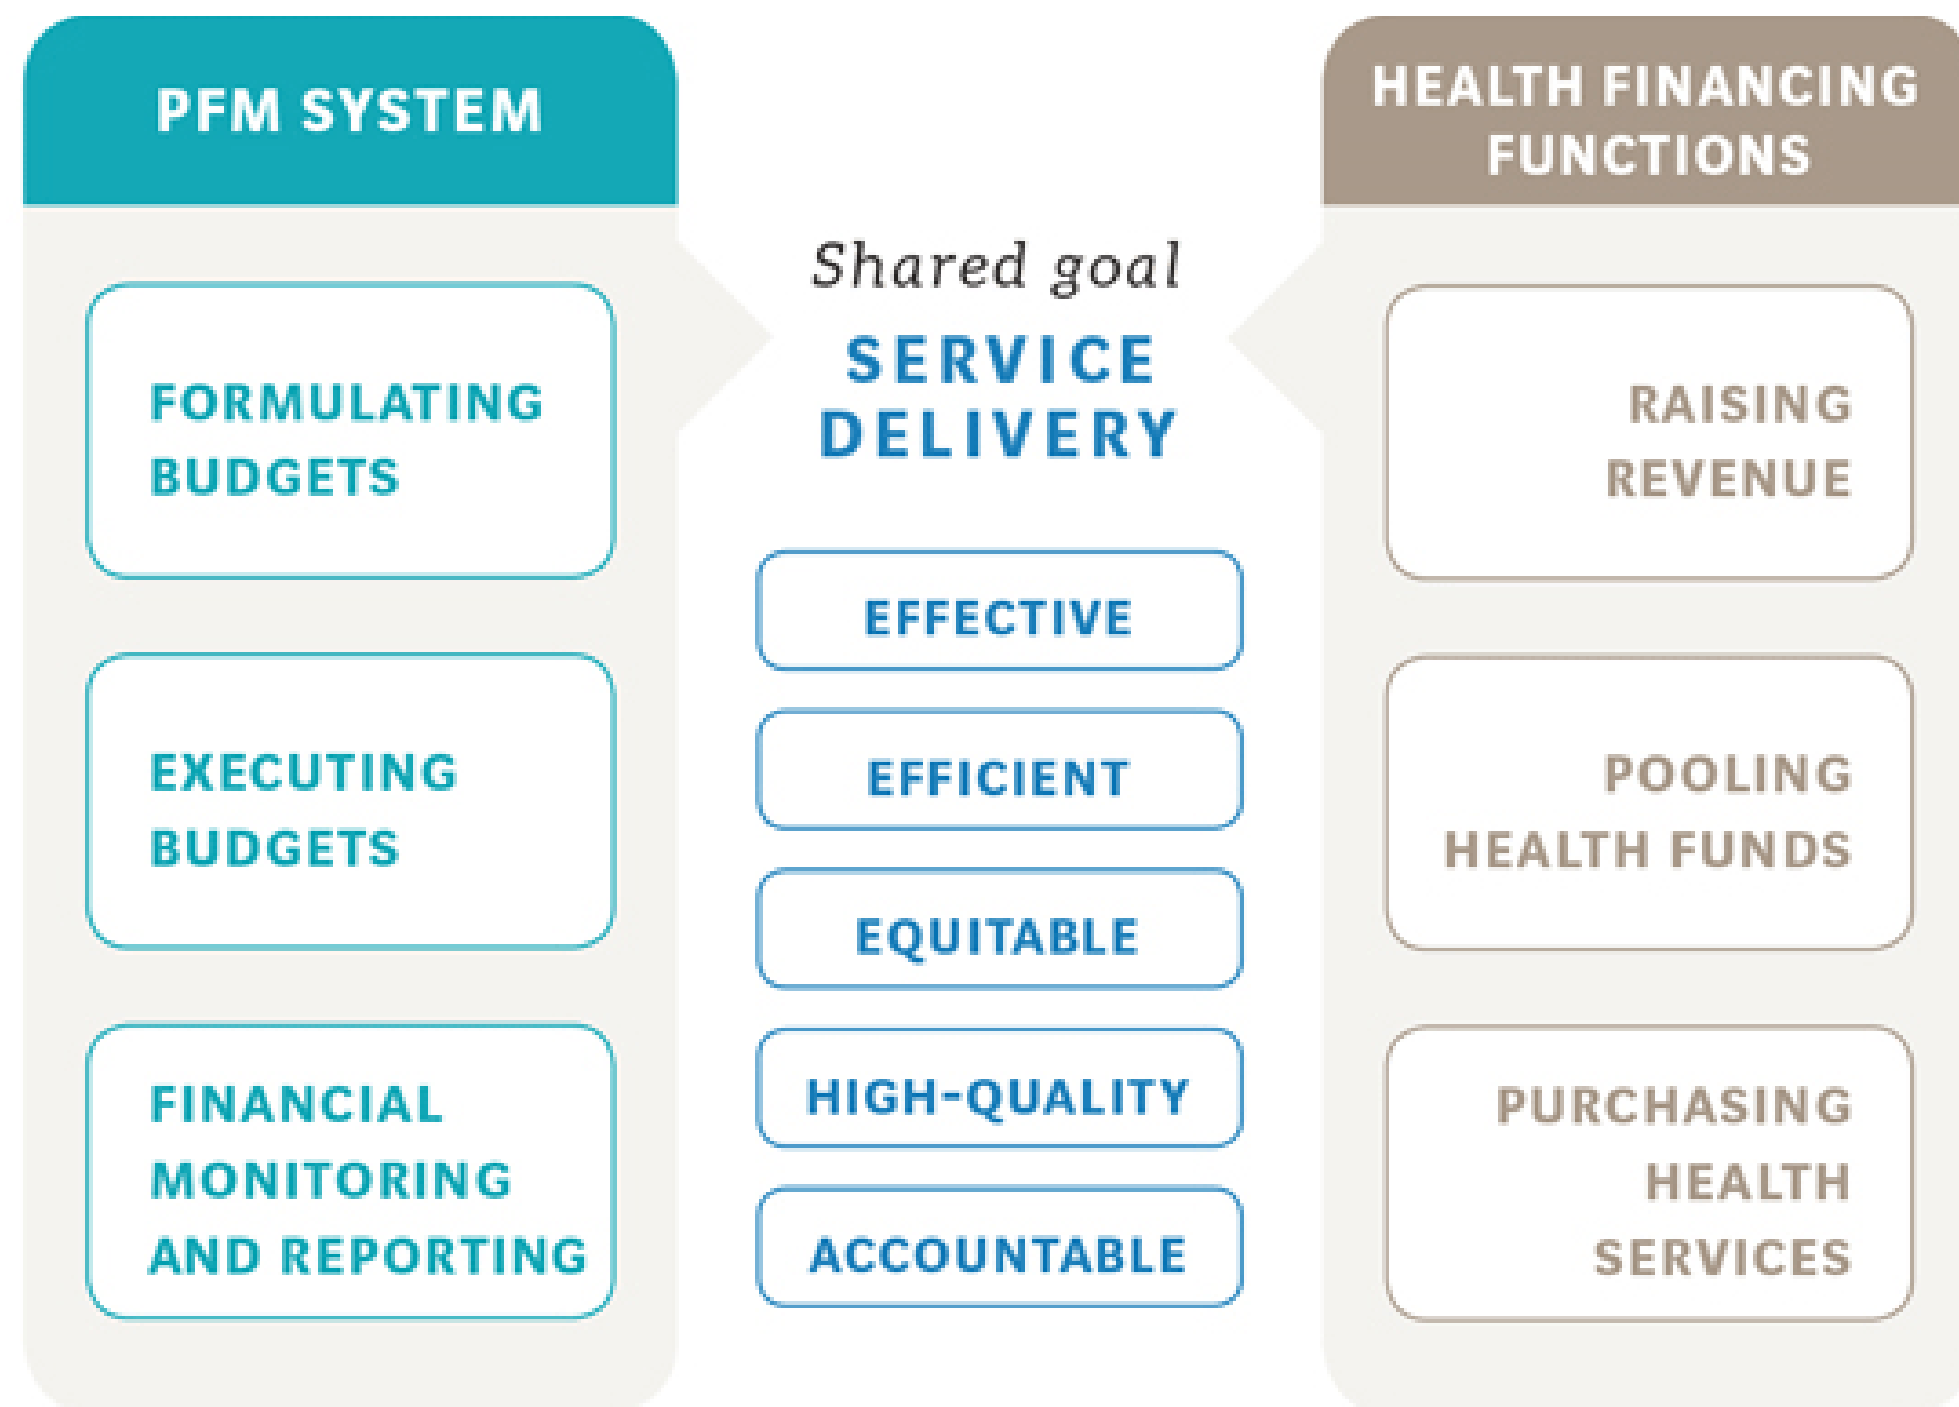

Time: This is a reference to when the pain started or how long ago it started.

PRACTICE MANAGEMENT SYSTEM (PMS)

The PRACTICE MANAGEMENT SYSTEM (PMS) is used to deal with the day-to-day operations of a medical practice. It is a Scheduling and Billing functionality centric system wherein its users can capture patient demographics, schedule appointments, maintain lists of insurance payers, perform billing tasks, and generate reports using it.

EP & EPW

Electrophysiology

An electrophysiology (EP) study is a test performed to assess your heart's electrical system or activity and is used to diagnose abnormal heartbeats or arrhythmia. The test is performed by inserting catheters and then wire electrodes, which measure electrical activity, through blood vessels that enter the heart.

ELECTRONIC MEDICATION MANAGEMENT (EMM)

EMM system supports the improved quality, safety and effectiveness of medication management within hospitals. This includes providing support for doctors, nurses and pharmacists to digitally prescribe, order, check, reconcile, dispense and record the administration of medicines.

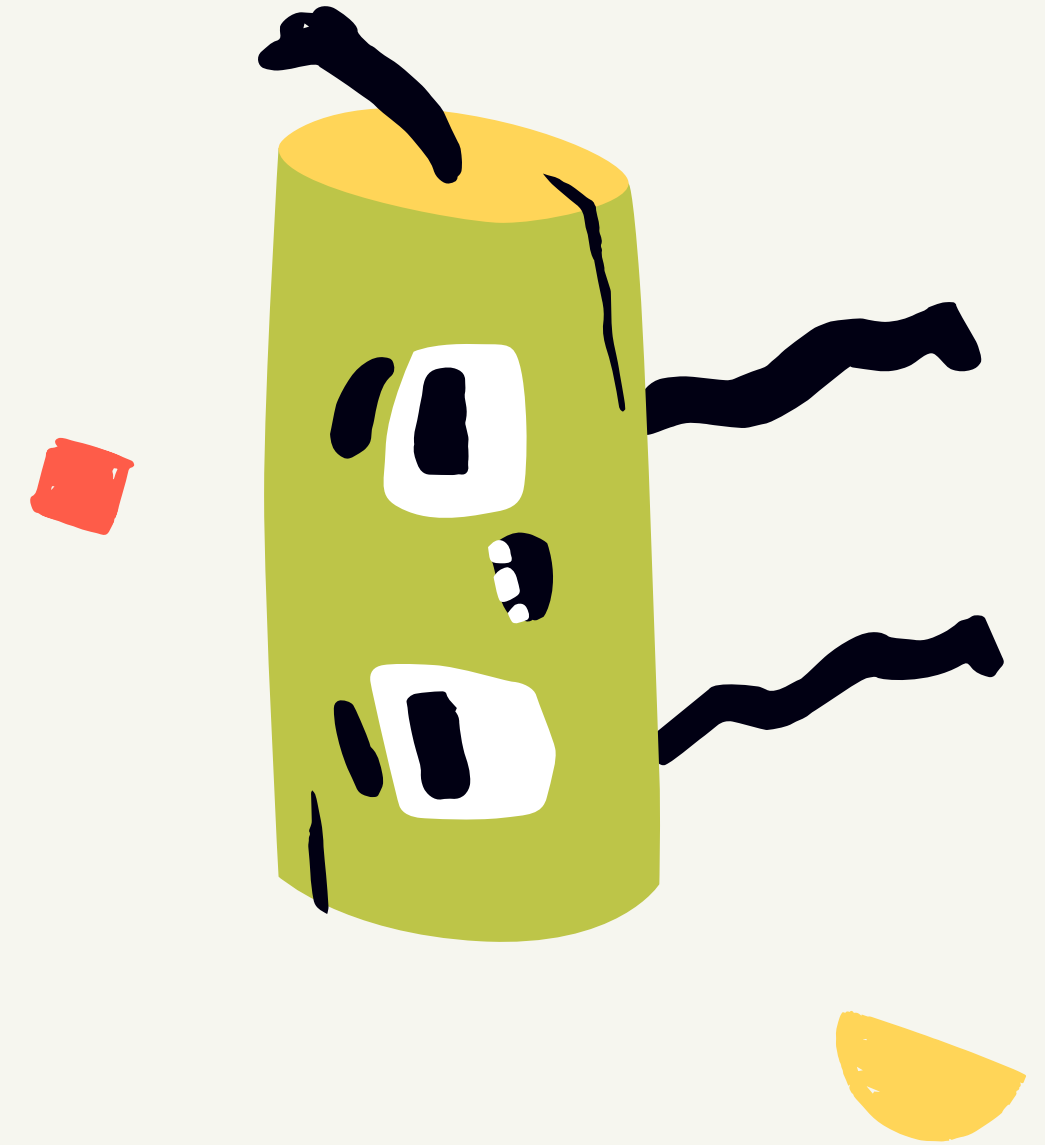

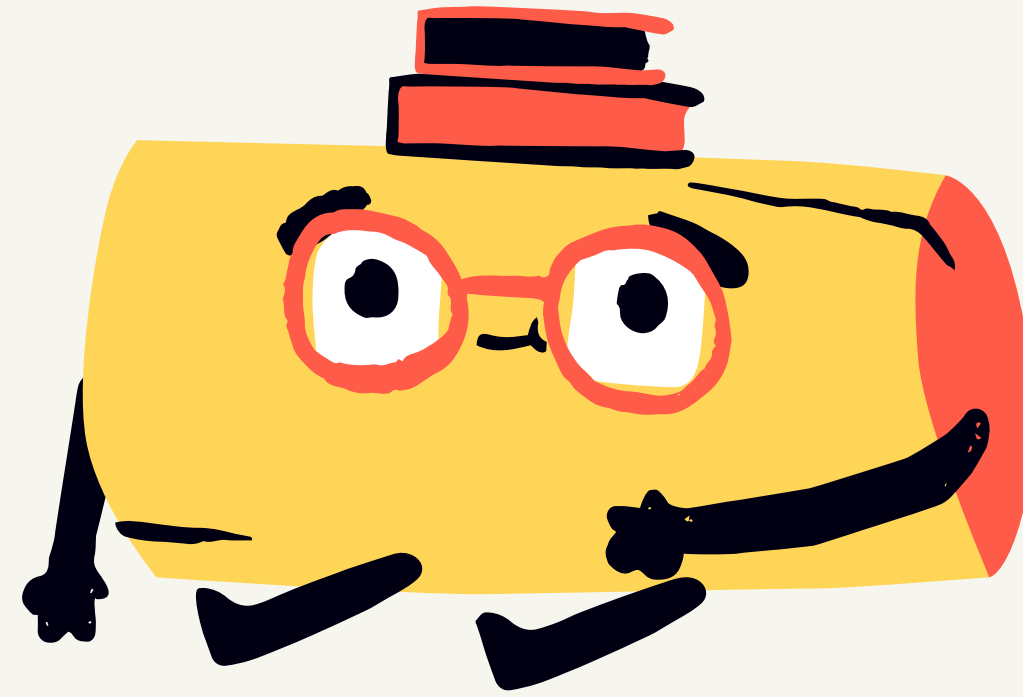

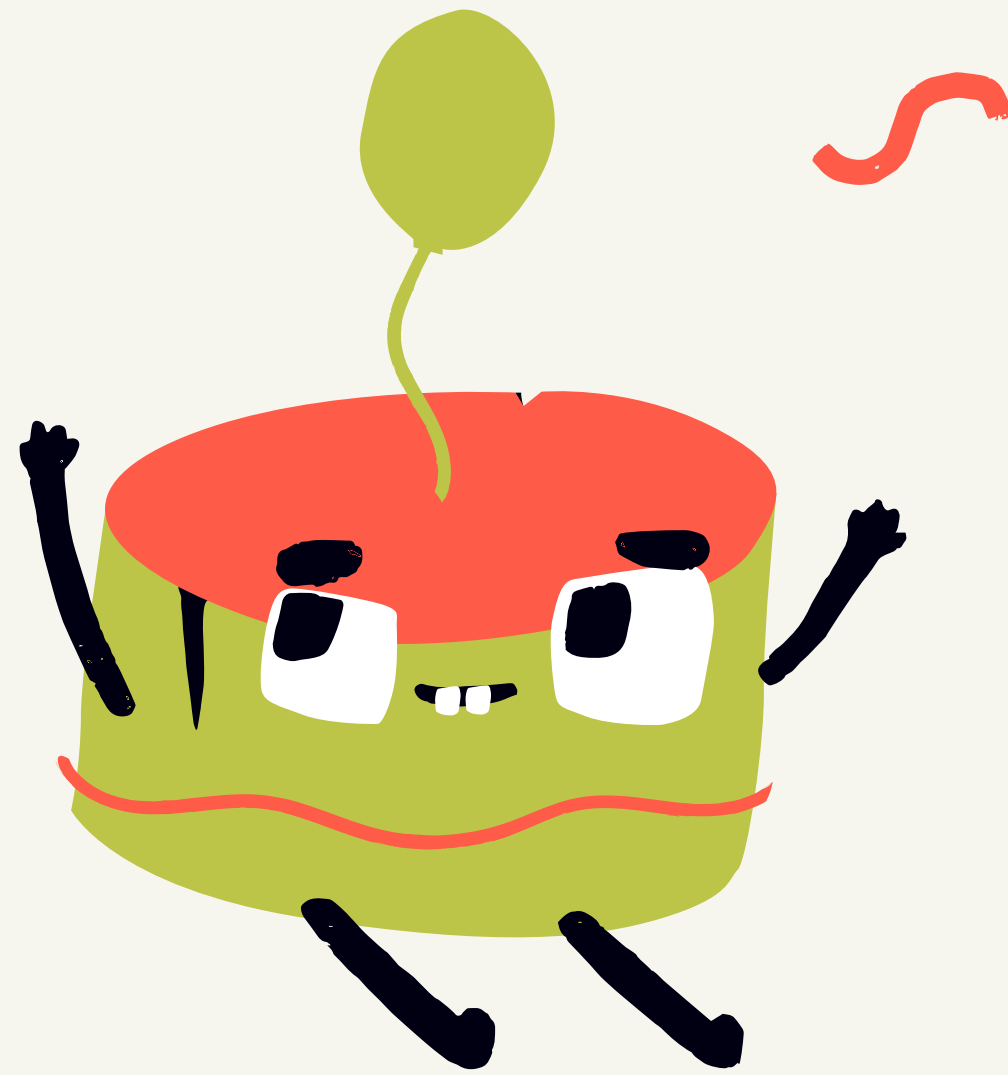

Roll-out strategies across the globe for EMR and EMM traditionally involve two main methodologies: — a 'big bang' approach on the day of go-live, or a phased ward-by-ward approach over months.

1. **Phased (or staged)** — usually a 'ward-by-ward' implementation over weeks or months until the whole hospital is converted to the electronic system. By the very nature of this method, it necessitates a hybrid medication system — patients that move between wards will require transcription of their medications from paper to EMM and vice versa. This is a high-risk scenario for medication safety and duplicates work effort during the transition period.

2. **'Big bang'** — an all at once implementation across the organization, usually activated on a single day or week. This option is likely to be disruptive to the entire hospital and would require comprehensive testing and a large training burden in a short timeframe.

Patient Centric EMMS Models

- Roll-out strategy
- Superuser strategy
- Post-go-live survey

HIE

* Health Information Exchange

Health Information Exchange allows health care professionals and patients to appropriately access and securely share a patient's medical information electronically.

Sharing electronic patient information enables providers to:

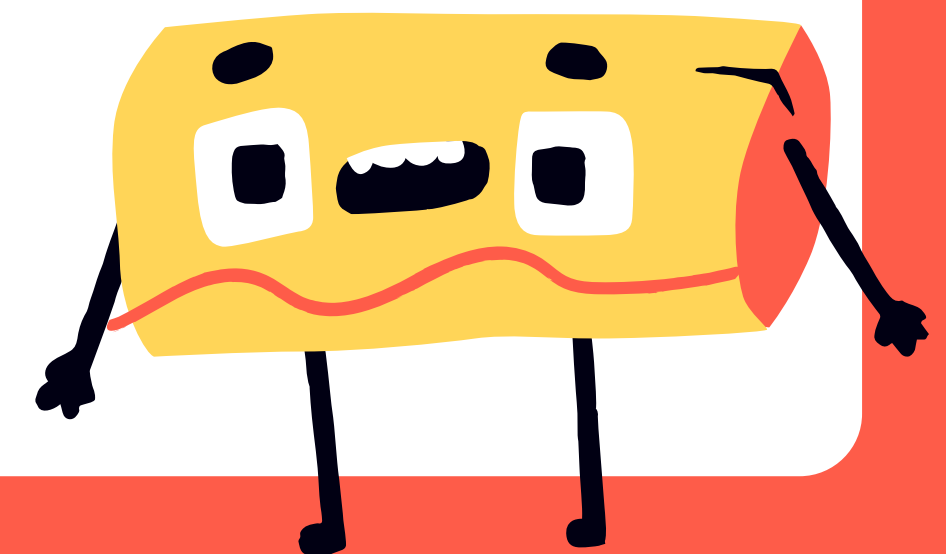

- Access and confidentially share patients' vital medical history, no matter where patients are receiving care—specialists' offices, labs, or emergency rooms
- Provide safer, more effective care tailored to patients' unique medical needs

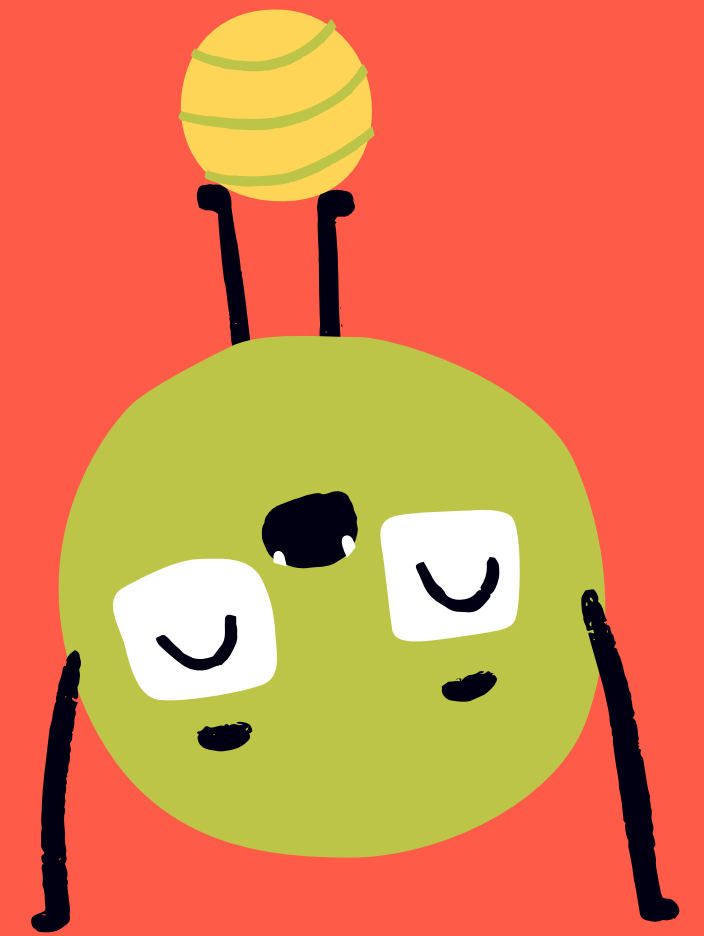

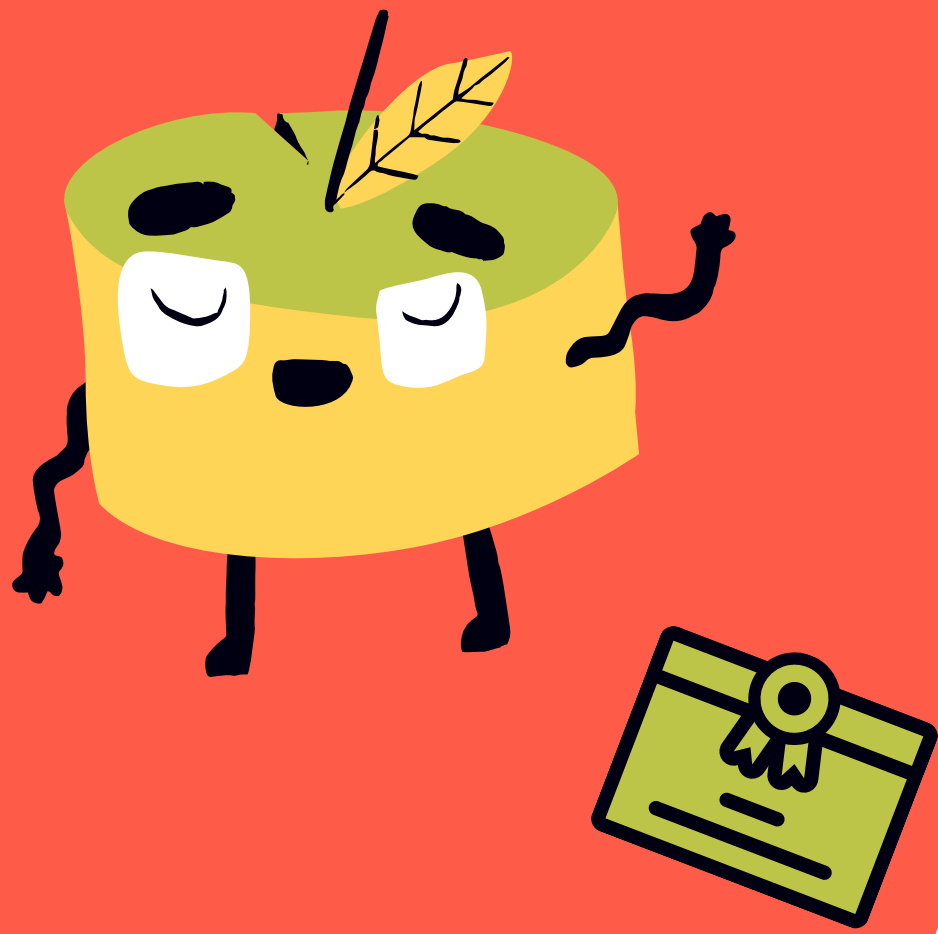

Health Information Exchange

The demand for electronic health information exchange among care professionals is growing along with nationwide efforts to improve the quality, safety, and efficiency of...

Customer relationship management(CRM)

It is a technology for managing all your company's relationships and interactions with customers and potential customers. The goal is simple: Improve business relationships. A CRM system helps companies stay connected to customers, streamline processes, and improve profitability.

The Contractor Medical Director (CMD)

The Contractor Medical Director (CMD) is a physician with expertise in Medicine and Medicare who works collaboratively with all contractor teams. The CMD is primarily responsible for clinical coverage determinations, such as Local Coverage Determinations (LCDs) and staff trainings on clinical matters, determinations regarding Investigational Device Exemption (IDE) requests, and collaborating with medical societies and peer groups to share information and provide education.

Certified Medical Director (CMD)

A Certified Medical Director (CMD) has gone through specific training and a credentialing program focusing on the importance of clinical and management knowledge specific to long-term care. They are certified by the American Board of Post-Acute and Long-Term Care Medicine (ABPLM), and dedicated to providing quality care to long-term care patients and oversight of the whole team.
